**CANINE OR FELINE ANESTHETIC CONSENT**

CANINE

FELINE

Before putting your pet, \_\_\_\_\_, under anesthesia, we will perform a full physical examination. However, many conditions, including disorders of the liver, kidneys, or blood, are not detected unless blood testing is performed. Such tests are especially important before any kind of anesthesia. For these reasons, we highly recommend blood screening before such procedures.

**PRE-ANESTHETIC BLOOD SCREEN CONSENT:**

Our laboratory is fully equipped and staffed to perform these important blood tests. Results will immediately be available to examine before anesthesia and/or surgery. Please indicate your choice below:

- YES            I want my pet to have a pre-anesthetic blood screen.
- NO             I do not want my pet to have a pre-anesthetic blood screen.

**LASER CONSENT:**

We offer laser surgery as an exciting new option for safe, comfortable surgery. Some benefits of laser are:

- \***Less pain** – laser energy seals nerve endings as it moves through tissue, which decreases pain sensation.
- \***Less bleeding** – laser seals small blood vessels during surgery, which allows our doctors to perform surgeries with extraordinary precision. This also decreases surgical time, thus reducing the length of time under anesthesia.
- \***Less swelling** – laser energy does not crush, tear or bruise because only a beam of intense light contacts the tissue.

Please indicate your choice below:

- YES            I want my pet to have laser surgery.
- NO             I do not want my pet to have laser surgery.

I understand that the above options are additional fees that will be added to surgical costs.
